

Wolfspeed Update

May 2026

Wolfspeed's latest industrial release

CPM3-10000-0300A

10000 V, 305 mΩ, 20 A, Bare Die Silicon Carbide MOSFET

- 99% conversion efficiency improves system level thermals by up to 50% compared to silicon IGBT-based systems
- Fast rise time of < 10 ns enables pulsed power applications
- Reliable performance including body diode usage
- Zero bipolar degradation, extending operating lifetime

HV DEVICES COMMERCIALIZATION PLAN (TILL END OF CY2027)

Die

Die			
	6.5kV MOSFET	10kV MOSFET	10kV PiN Diode
Rdson / Vf	~105mΩ @ 25C	~305mΩ @ 25C	~6.9V @ 30A, 25C
Die Size	8.1mm x 8.1mm	8.1mm x 8.1mm	8.1mm x 8.1mm

Discrete

Sampling package

Discrete			
	6.5kV MOSFET	10kV MOSFET	10kV PiN Diode
Rdson / Vf	~105mΩ @ 25C	~305mΩ @ 25C	~6.9V @ 30A, 25C
Die Size	8.1mm x 8.1mm	8.1mm x 8.1mm	8.1mm x 8.1mm

Modules

Module		
	6.5kV MM3	10kV MM3
Rdson	~8.7mΩ @ 25C	~25mΩ @ 25C

HV DEVICES APPLICATIONS (>5KV)

Solid-state Transformer

Mining

Subsea LNG

HVDC

Nuclear Fusion Power

Pulsed Power

... and several unexplored applications.

NVIDIA'S PRESENT POWER DISTRIBUTION FOR AI DATA CENTERS

Medium-Voltage Line Transformer

Grid constraints are stalling the global deployment of AI infrastructures

- ~20% planned data center projects at risk of delays
- ~3 years procurement lead time for MV transformers
- ~30% shortage of MV transformers

Semiconductor-based solid-state transformer (SST) is the solution!

NVIDIA'S 800 VDC POWER DISTRIBUTION FOR AI DATA CENTERS

35 k VAC Power Line

35 kV AC →

SST

→ 800 VDC

NVIDIA'S 800 VDC POWER DISTRIBUTION FOR AI DATA CENTERS

- HVDC Transmission level: $\sim \pm 500\text{kV dc}$
- Typically using series-stacked 4.5kV Si IGBT-based converter valves
- Commercial availability of HV SiC devices can reduce the required number of stacked devices significantly
- Reduced complexity, less points of failure, improved reliability

AI DATA CENTER

Future

THE POWER TO
MAKE IT REAL™
